

LEGI SIM.

PROBLEM STATEMENT

Build an AI agent sandbox that simulates a realistic virtual society to test and predict how major policy changes will impact different communities and the economy before they go live.

TEAM NAME

NEUROCOOKED

TEAM MEMBERS

Dikshit RJ, Vaishnavi Saraf, Shreya Devendra, Sowmiyanathan Raja, Sayan Maity

CATEGORY

Agentic AI : –Autonomous workflows for public and social services.

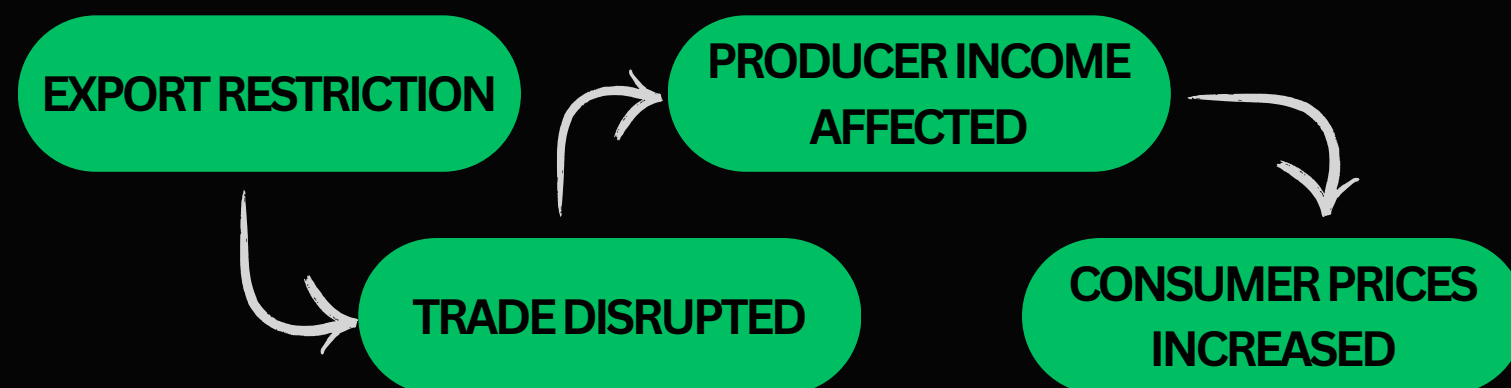

THE PROBLEM.

Policies are announced with
HEADLINE PROMISES, but real effects
spread unpredictably across income
groups, regions, and occupations

RICE EXPORT RESTRICTIONS

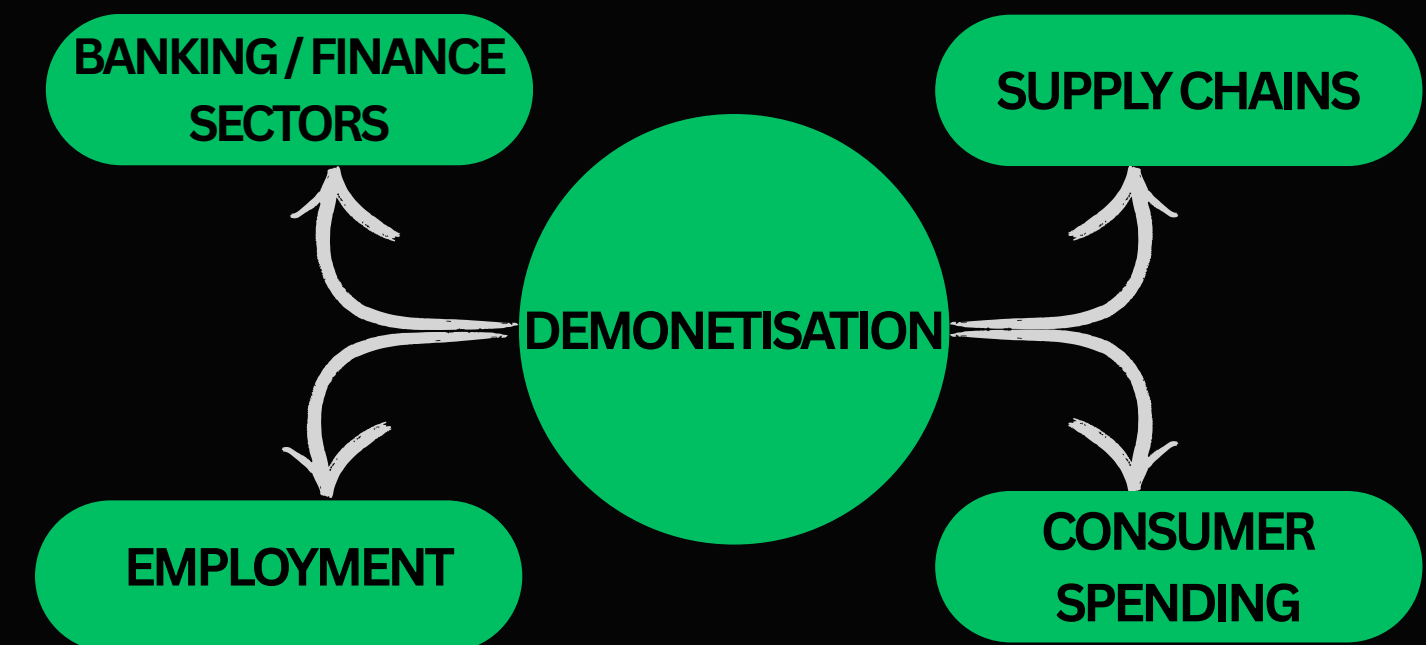

2007–2011

- **CHANGE:** RICE EXPORTS WERE RESTRICTED AND LATER BANNED.
- **PROBLEM:** PRODUCERS AND CONSUMERS WERE AFFECTED DIFFERENTLY.
- **IMPACT:** PRODUCERS SUFFERED, WHILE CONSUMER RICE PRICES ROSE IN EXPORT-HEAVY DISTRICTS.
- **THE RIPPLE:**

DEMONETISATION, 2016

- **CHANGE:** ₹500 AND ₹1,000 NOTES WITHDRAWN.
- **OUTCOME:** CASH-DEPENDENT BUSINESSES FACED LIQUIDITY ISSUES.
- **CHALLENGE:** IMPACT VARIED ACROSS SECTORS AND REGIONS.

**WHAT IF WE COULD SIMULATE THESE
EFFECTS BEFORE IMPLEMENTATION,
USING AI-AGENTS HAVING HUMAN-
PERSONAS?**

INTRODUCING

LEG  **ISM**

The logo for Legisim is a white silhouette of a classical building with a dome and columns. The letters 'I', 'S', and 'I' are integrated into the structure of the building, with the 'S' being blue and the 'I's being white. The letters 'LEG' are orange and 'ISM' are green.

POLICY IMPACT SIMULATION

Test proposed policies and predict their potential effects before implementation.

AI AGENT WORKFLOW

Use AI agents to autonomously analyze policies, simulate ripple effects, and generate impact insights.

SCENARIO COMPARISON

Compare different policy versions and population scenarios to identify changing outcomes.

IMPACT
AND
USE CASES.

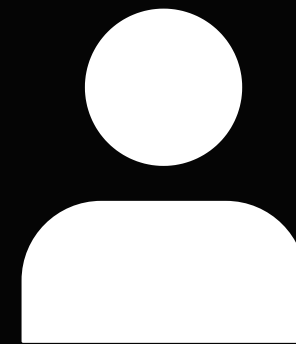

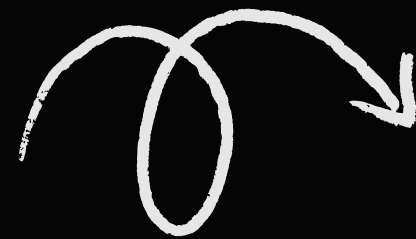

OUR IDEA.

AI-powered simulation of a society
where we can introduce a major
policy/action and see how it could
affect different parts of the population
and the country over time.

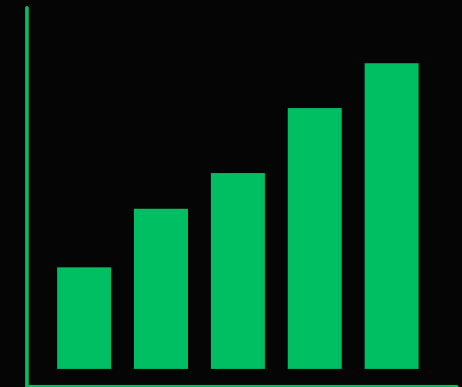

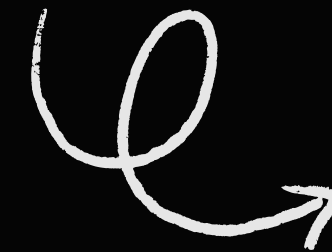

SET PARAMETERS

Government user defines
the policy, population, and
regional parameters for the
simulation.

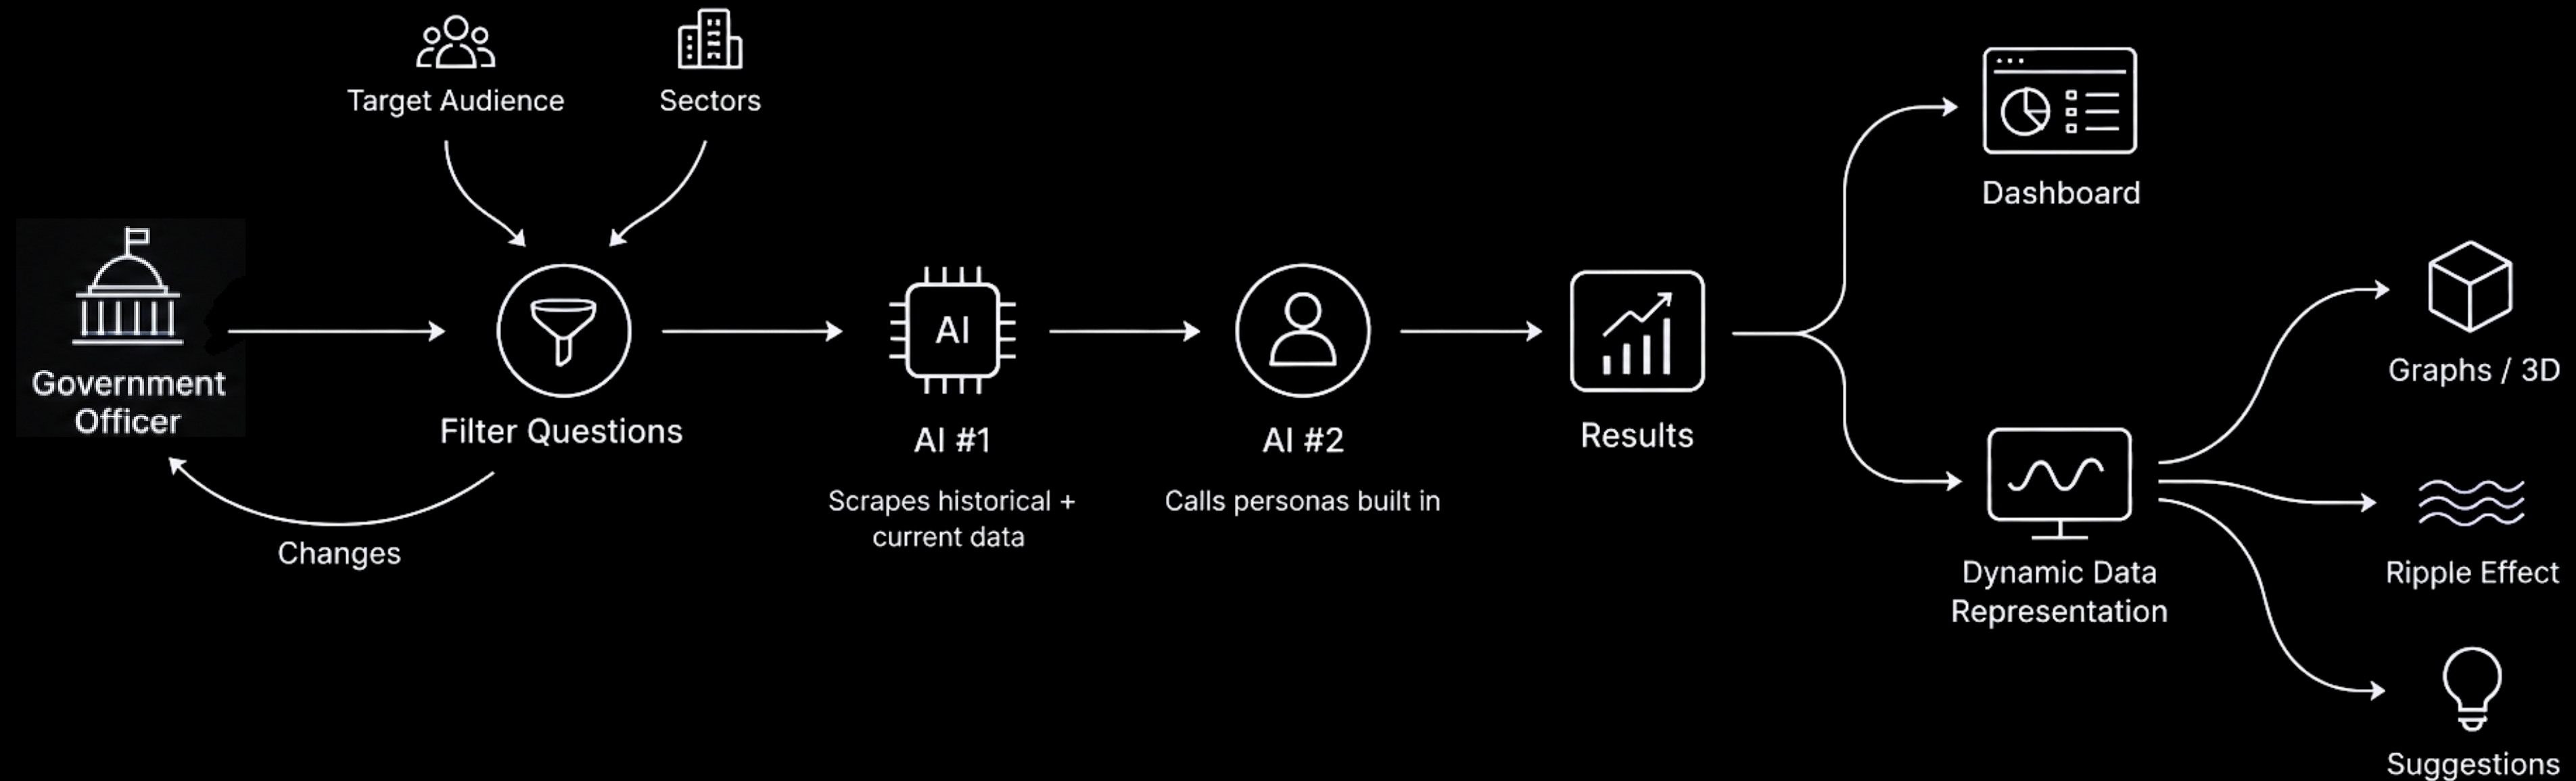

AI SIMULATES

Multiple AI agents create
population personas and
simulate how they respond
to the proposed policy.

ANALYZE IMPACT

The system presents
economic, social, and
regional impacts, with
comparisons and AI-
powered queries.

12. Materials Consumed	#####	2,383	#####	86,245	78,44,227	97,59,369	2,04,286	2,06,32,009	1,69,72,412	25,46,115	42,23,074	#####	6,19,1
13. Total Inputs	#####	3,744	#####	1,24,713	98,88,943	#####	2,92,934	2,90,87,261	1,93,09,009	36,37,050	52,62,215	#####	9,55,2
14. Products & By-products	#####	3,450	#####	1,47,693	#####	#####	2,81,310	2,81,18,714	2,16,87,387	33,51,750	63,59,901	#####	8,65,7
15. Value of Output	#####	4,421	#####	1,57,962	#####	#####	3,76,591	3,34,36,171	2,26,16,246	43,56,207	69,54,174	#####	#####
16. Depreciation	3,55,19,270	202	18,78,497	9,023	4,72,792	2,01,310	10,093	8,04,647	4,07,643	75,148	2,14,389	58,21,236	17,4
17. Net Value Added	21,03,14,335	474	80,07,080	24,226	24,29,180	13,94,119	73,564	35,44,263	28,99,593	6,44,009	14,77,570	2,90,99,304	1,35,5
18. Rent Paid	6,33,398	1	32,133	338	7,244	3,999	23	22,153	2,365	1,730	3,687	70,860	1,9

TECHNICAL APPROACH.

UI AND PROTOTYPE.

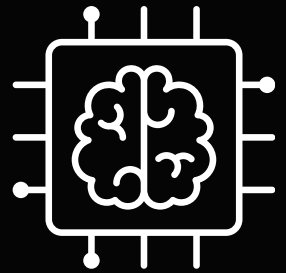

CHALLENGES AND MITIGATIONS.

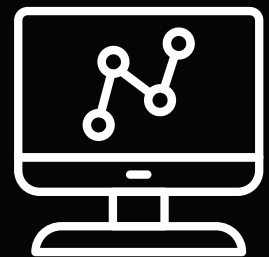

CHALLENGE	MITIGATION
Data Reliability	Cross-check multiple trusted data sources
Complex Policy Interactions	Model dependencies and ripple effects
Unpredictable Human Behaviour	Simulate diverse population personas
Bias in Historical Data	Compare datasets and flag potential bias
Model Accuracy	Validate simulations against historical outcomes

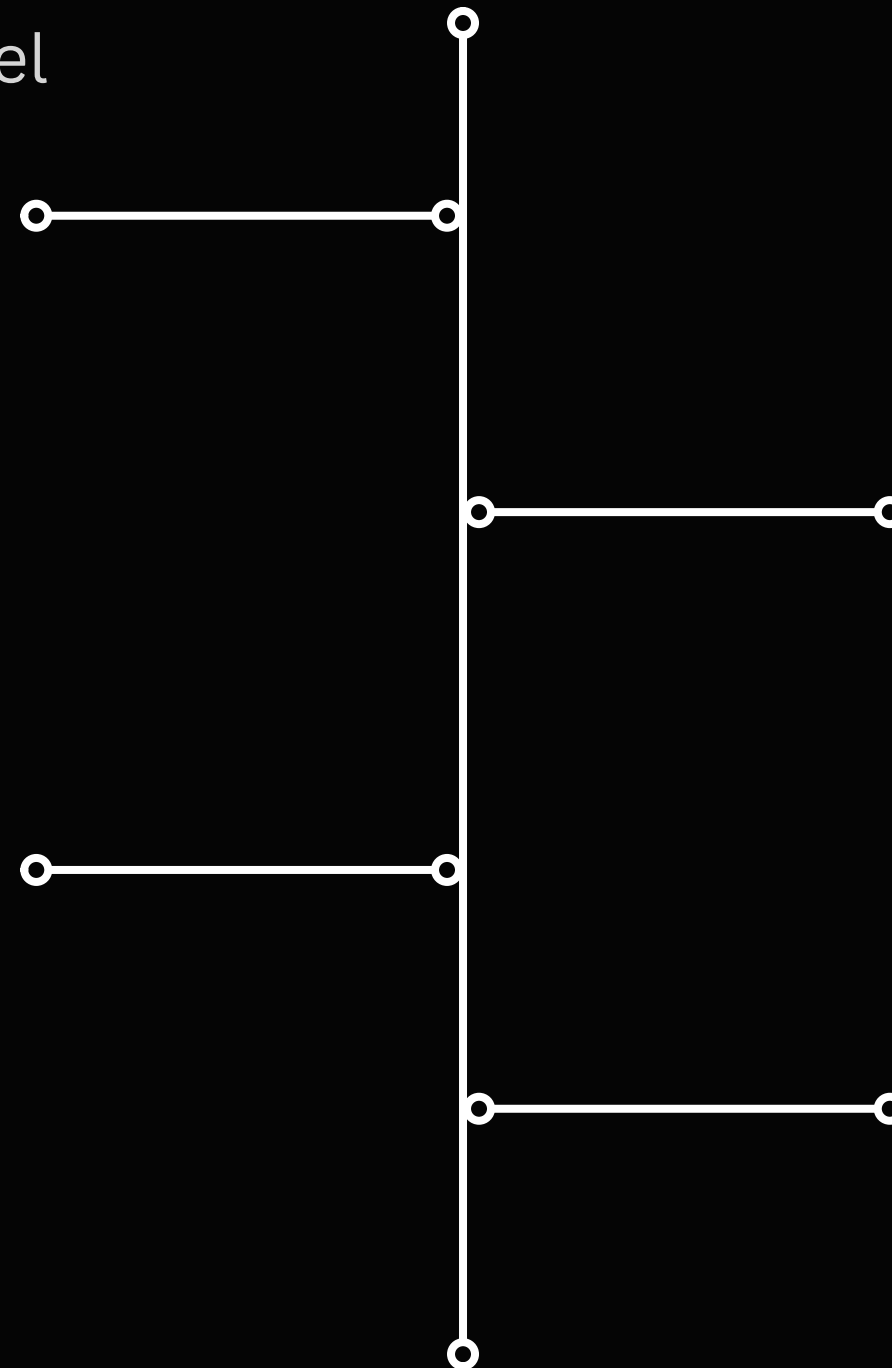

FEASIBILITY AND VIABILITY.

AI agents research policies, model cohort reactions and explain possible outcomes.

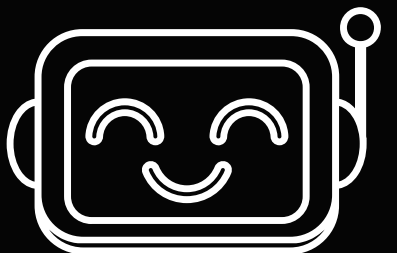

Starts with one policy, limited regions and income groups, then expands incrementally.

Uses official datasets, policy analogues and sourced research instead of costly primary data collection.

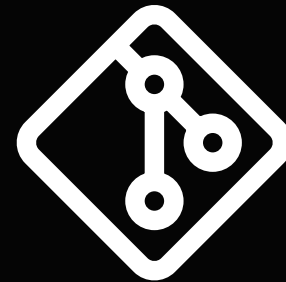

Weighted cohorts control scale, while human review, backtesting and expert checks validate the results.
